

PRIVACY AND PROTECTION WITHOUT LOSING THE GREAT OUTDOORS

TRELLIDOR

THE ULTIMATE CRIME BARRIER

Wide open spaces are one of the biggest attractions for visitors to our magnificent country. They value their views of the great outdoors and the wildlife that's literally on their doorstep. There is, however, a fine line between providing guests with the experience they're after and looking after their safety. Trellidor Namibia offers a range of custom-made products that help protect guests from possible dangers without blocking the scenery they've come for.

TRELLIDOR RETRACTABLE SECURITY

Galvanised steel retractable security gates for doors and windows that slide out of the way along a recessed track. They stack neatly to the side when not required for protection or to open up private or public areas during the day. These gates can be powder coated to suit the décor colour palette so that they blend in with the surroundings. Corrosion and UV resistant and fitted with patented Trellidor locking systems.

TRELLIDOR POLYCARBONATE BAR

Burglar proofing for windows made from transparent and UV resistant polycarbonate panels in a neat aluminium frame. Units are installed with a tamper-proof fixing system and window handles and hinges are easily accommodated. You can see right through the panels, which effectively keep out monkeys and baboons as well as providing protection against a break-in or petty theft.

TRELLIDOR CLEAR GUARD

Security screens made from a woven stainless steel mesh panel in an aluminium frame. This is not just a security product as the screen blocks out everything from insects to snakes to intruders. Air and light filter through the screens but they block out high winds, dust and excessive sunlight and heat. The eye sees right through the mesh screen door or window, so guests still feel part of the outdoor action.

TRELLIDOR ROLLERSTYLE

These are multi-purpose aluminium roller shutters that roll up into a neat shutter box, revealing the full effects of the outside view. When rolled down they provide excellent security as well as protection against the weather. They're ideal for bedroom doors and windows; public areas such as patios, serving hatches and multi-media rooms; or used as room dividers. They can be fully automated and remote controlled.
